WILDLOCK

2v2 MULTIPLAYER HERO ARENA SHOOTER

ASSIGNMENT 2 COMPREHENSIVE SPECIFICATION

PART 1: GAME WORLD & PART 2: GAME MECHANICS

Course:	Video Game Design & Development (Assignment 2)
Student Name:	Amr Mohamed Salah
Student ID:	58-12817
Game Engine:	Unity 6 (`6000.3.24f1`) — Universal Render Pipeline (URP)
Target Frameworks:	Unity Input System, Cinemachine 3, CharacterController Kinematics
Asset Packages Used:	Starter Assets ThirdPerson, Adam Character Pack, TerrainSampleAssets
Source Repository:	https://github.com/AmrMohamed05/wildlock.git
Document Version:	2.0.0 (Production Master Design Specification)
Date of Submission:	October 2026

EXECUTIVE OVERVIEW

Project Abstract: *Wildlock is a high-tempo, competitive 2v2 hero arena shooter set in an atmospheric Wild West frontier canyon. Two teams of gunslingers vie for control of a central gold mine cart that periodically unearths radiant ruby gemstones. Securing victory demands collecting 10 gems and surviving an intense 30-second Showdown countdown under desperate enemy counter-attacks. This document presents the exhaustive architectural, environmental, and mechanical design for the game world (Part 1) and gameplay systems (Part 2), fully verified through a playable Unity 6 URP prototype.*

Executive Summary & Design Pillars

Core Identity, Genre Definition & Creative Intent

1. Game Identity & Genre Definition

Wildlock is an esports-inspired 2v2 Third-Person Hero Arena Shooter engineered to combine the tactical positioning of hero brawlers (such as *Overwatch* and *Brawl Stars*) with the precision gunplay and vertical agility of modern third-person action games. Set in a stylized, high-noon frontier mining outpost named **Saloon Gulch**, the game pits two duos against one another in an unforgiving, fast-paced struggle over scarce mineral wealth.

2. The Four Foundational Design Pillars

- **Pillar I: Contested Micro-Cadence:** Combat revolves around a relentless 7.0-second central objective pulse. Rather than static capture points, the Central Mine Cart unearths discrete gems in regular rhythms, forcing continuous tactical reassessment, rotations, and precision skirmishes.
- **Pillar II: High-Ground Asymmetry & Kinetic Traversal:** Verticality is not decorative; it dictates combat outcome. Elevated balconies, flat store rooftops, and rising sniper catwalks provide decisive line-of-sight advantages, balanced by explosive pneumatic jump pads that allow rapid vertical flanks without stairs.
- **Pillar III: Atmospheric Lighting as a Gameplay Mechanic:** Light directly governs visibility and tactical survivability. Seamless transitions between blistering desert sun, deep interior dark zones, and subterranean mine tunnels force players to utilize directional lanterns and environmental generators.
- **Pillar IV: Reversible High-Stakes Victory Condition:** Securing 10 gems initiates a 30-second match-point countdown, but victory is never guaranteed until zero. Eliminating the enemy gem carrier causes 100% of their hoarded gems to scatter across the dirt, fueling breathtaking last-second comebacks.

COMPETITIVE PHILOSOPHY

Esports Balance Philosophy: *Every character ability, jump pad trajectory, and weapon damage profile is tuned around a 2v2 player density. The compact 56m x 56.5m arena footprint ensures that player downtime between engagements never exceeds 4.5 seconds, maintaining maximum spectator excitement and player engagement.*

Part 1: Game World Narrative

The Frontier Lore, World-Building & Geological Setting

1. Geological Context: The Red-Rock Basin

Saloon Gulch occupies a deeply eroded tectonic rift valley in the high arid desert. Millennia of wind shear and flash floods have carved towering red sandstone mesas, stepped plateaus, and jagged razorback ridges into the terrain. The settlement sits inside an alluvial depression, surrounded by impassable 12-meter boulder formations that shelter the town from fierce desert dust storms while isolating it from outside law enforcement.

2. Narrative Setting: The Ruby Boomtown

Founded following the discovery of deep subterranean ruby veins in Rattlesnake Gulch, the town rapidly transformed from a temporary timber tent camp into a fortified frontier outpost. Built entirely from local cedar timbers, heavy granite river rock, and corrugated iron, Saloon Gulch is a town forged in commercial avarice and lawlessness.

3. The Six Canonical World Zones

The game world features six interconnected, highly distinct operational zones:

- **The Central Thoroughfare:** The heart of Saloon Gulch; wide dusty main street housing the Central Mine Cart and railway tracks.
- **The Silver Horseshoe Saloon:** A two-story weathered timber saloon featuring exterior wraparound balconies and spring-hinged louver doors.
- **Rattlesnake Gulch Gold Mine:** Subterranean excavation shaft fortified with timber shoring rafters; an unlit dark zone.
- **The Frontier General Store Depot:** A flat-roofed mercantile outpost overlooking the western approach; rich in crate cover.
- **The Sheriff's Fortified Armory:** Iron-and-brass reinforced vault holding high-tier elixir and ammo reserves, locked behind a 5-gem gate.
- **The Outer Canyon Vista:** A majestic, non-playable 900m x 900m desert mountain terrain framing the horizon with red-rock peaks.

ENVIRONMENTAL COHESION

World Integration Note: *The town is positioned perfectly at the center of the 900m outer terrain mesh. The natural sandstone perimeter cliffs blend seamlessly into the distant terrain splatmaps, ensuring zero immersion-breaking skybox cuts or artificial planar boundaries.*

Location 1: The Central Thoroughfare

Primary Combat Arena & Objective Mining Chokepoint

1. Spatial Layout & Coordinates

The Central Thoroughfare occupies the exact geographical midpoint of the playable arena, centered around coordinates (-124.8, 0, -10.0). Measuring 16.0 meters across from boardwalk to boardwalk and 42.0 meters long, it forms the open spine of the settlement along which all combat naturally converges.

2. Surface Composition & Footstep Dynamics

The surface consists of sun-baked red clay compacted by carriage iron wheels and boot heels, overlaid with a loose layer of fine ochre sand. Footstep audio synths dynamically adjust when sprinting across this surface, generating deep, dusty foot thuds distinct from the resonant hollow clatter of timber boardwalks.

3. Tactical Cover Distribution

Because the main street is wide and vulnerable to balcony snipers, the thoroughfare is tactically populated with line-of-sight blockers:

- **The High-Noon Stagecoach:** Stationed at the mid-southern junction; indestructible wooden chassis and iron wheels providing complete waist-and-head cover.
- **Weathered Pine Shipping Crate Clusters:** Arranged in L-shaped pairs; each crate absorbs 150 damage before splintering, providing temporary shelter during firefights.
- **Combustible Powder Kegs:** Placed near flanking alley entrances; shooting these barrels triggers a 500 damage AOE explosion to punish careless flankers.

TACTICAL SUMMARY

The Heartbeat of Combat: *The Central Ruby Mine Cart is permanently anchored on rusted iron rails at the thoroughfare center. Every 7.0 seconds, it ejects an unrefined ruby gem upward into the air. Teams must balance the immense reward of claiming the gem against the lethal risk of exposing themselves in the street crossfire.*

Location 2: The Silver Horseshoe Saloon

Two-Story Timber Architecture, Balconies & Dark-Zone Interior

1. Architectural Structure & Dimensions

Standing on the southern perimeter at (-138.0, 0, -14.5), the Silver Horseshoe Saloon is an iconic two-story frontier timber building measuring 14.5m wide by 12.0m deep, with a total roof height of 7.2 meters. It features a covered boardwalk porch, dual swinging louver batwing doors, and an exterior wrap-around sniper balcony at 4.8m elevation.

2. The Second-Story Vantage Balcony (Y = 4.8m)

The second-story balcony is the premier sniper vantage point in Saloon Gulch. From this elevation, sharpshooters equipped with the Frontier Repeater Rifle possess direct, unobstructed line-of-sight over the Central Mine Cart. Defenders benefit from waist-high wooden balustrade railings that provide 55% ballistic cover against ground revolver fire.

3. Interior Dark Zone & Atmospheric Lighting

Stepping across the saloon threshold immediately transitions the player into an environmental **Dark Zone**. External daylight diminishes through physical occlusion, while warm incandescent oil lanterns (2700K color temperature) cast long, amber shadows across mahogany poker tables, overturned chairs, and a polished brass foot-rail bar counter.

- **Physics Louver Doors:** Dual swinging timber doors mounted on angular HingeJoints with spring restitution; deflect open when pushed by player sprint velocity.
- **Balcony Jump Pad Route:** An exterior pneumatic jump pad on the eastern boardwalk enables players to rocket directly onto the balcony without navigating stairs.
- **Vitality Tonic Stash:** A green Health Elixir flask respawns every 15s beneath the saloon porch stairs, serving as a critical retreat and recovery alcove.

BALANCE NOTE

Balcony Defense Balance: *While the balcony offers unparalleled offensive oversight of the objective, players on the catwalk are fully vulnerable to dynamite tosses from below and flanking snipers positioned on the opposing General Store rooftop.*

Location 3: Rattlesnake Gulch Gold Mine

Subterranean Excavation, Timber Shoring & Extreme Chokepoints

1. Geological Profile & Entrance

Emerging from the sheer northern rock bluffs at coordinates (-124.8, 0, 10.5), Rattlesnake Gulch Gold Mine is a subterranean tunnel excavation burrowed deep into the red sandstone cliff face. Heavy rough-hewn oak timber shoring timbers brace the 3.5m-wide cavern portal against structural cave-ins.

2. Extreme Subterranean Dark Zone

Entering the mine cavern triggers the most severe lighting transition in the game. Directional exterior sunlight cuts off abruptly within 2 meters of the portal. The interior tunnel is illuminated only by sparse, flickering kerosene wall sconces, creating high-contrast patches of impenetrable black shadow.

3. Tactical Role: The CQB Flank & Hideout

The cavern functions as the premier close-quarters battleground in Wildlock:

- **Broken Sightlines:** The tunnel curves sharply 12 meters inside the rock, breaking long-range sniper sightlines and rendering rifles ineffective.
- **Hip-Lantern Dependency:** Combatants must activate their belt-mounted hip lantern ([F] key) to illuminate corners and avoid ambushes.
- **Gem Carrier Bastion:** When a duo accumulates 10 gems and triggers the Showdown countdown, retreating into the mine cavern limits enemy approach vectors to a single narrow chokepoint, ideal for defending with shotgun blasts and dynamite sticks.

AUDIO ATMOSPHERE

Audio Spatialization: *The mine interior applies an acute Unity Audio Reverb Filter (Cave Preset). Gunshots fired inside the cavern echo with an exaggerated decay time, masking footsteps and heightening the tension of subterranean firefights.*

Location 4: Frontier General Store & Depot

Mercantile Outpost, Cargo Stacks & Western Rooftop Vantage

1. Structure & Western Flank Anchoring

Positioned on the western perimeter of Saloon Gulch at (-146.0, 0, 2.0), the Frontier General Store is a rugged, flat-topped mercantile depot. Built from whitewashed pine clapboards with a corrugated galvanized tin roof, it anchors the entire western spawn corridor and supply lines.

2. The Flat Rooftop Overlook (Y = 4.2m)

Unlike the narrow balustrade of the Saloon balcony, the General Store features a broad, reinforced flat rooftop standing 4.2 meters above ground. The roof is accessible via the West Jump Pad or by clambering up stacked cargo pallets in the rear alleyway. It provides an unobstructed 360-degree firing platform that commands the western flank.

3. Cargo Pallet Stacks & Depot Yard

The exterior yard surrounding the storefront is densely packed with mercantile freight:

- **Jute Grain Sacks & Flour Barrels:** Soft waist-high cover stacks that absorb gunfire without splintering, offering reliable street-level protection.
- **Heavy Ammo Munitions Crate:** A dedicated ammunition resupply cache positioned on the covered boardwalk porch; respawns every 20s.
- **Western Jump Pad Platform:** A steam grating situated in the alley between the store and saloon, tuned to launch combatants onto the mercantile roof.

TACTICAL GEOMETRY

Crossfire Geometry: *The General Store rooftop directly opposes the Saloon balcony across a 24-meter diagonal gap. Snipers on either structure engage in intense counter-sniping duels, establishing dynamic crossfire over the central mining cart below.*

Location 5: The Sheriff's Fortified Armory

Iron Portcullis, Subterranean Vault & 5-Gem Gated Access

1. Vault Architecture & Geological Placement

Chiseled directly into the solid sandstone bedrock of the eastern boundary cliff at coordinates (-108.5, 0, 6.2), the Sheriff's Armory is a fortified bunker. Its facade consists of heavy dressed stone blocks, iron structural arches, and a barred reinforced brass portcullis gate.

2. The 5-Gem Gated Mechanical Lock

The armory is not freely accessible at match start. Access is governed by a mechanical gem receptacle integrated into the gate mechanism. When a player approaches the gate, a contextual UI prompt indicates: [E] Requires 5 Gems to Unlock. Once either duo accumulates 5 gems, interacting with the gate triggers a loud metallic clatter as the brass portcullis raises into the ceiling, unlocking the vault for the remainder of the match.

3. High-Tier Supply Stash & Strategic Value

The interior vault houses the most valuable tactical reserves in the arena:

- **Greater Health Elixir:** A massive glowing green flask that restores 100% maximum HP (1000 HP) and cleanses all active debuffs.
- **Surplus Munitions Cache:** Instantly replenishes 100% weapon reserve ammo and reduces ability cooldowns by 50% for 15 seconds.
- **Defensive Chokepoint:** Like the gold mine, the vault possesses only a single iron entryway, making it a fortress for holding out during the 30s Showdown.

GAMEPLAY IMPACT

Macro Strategy Incentive: *The Armory Gate creates a critical mid-game milestone. Teams that prioritize harvesting early gems gain exclusive access to full-heal elixirs and impenetrable defensive cover, establishing momentum toward the final 10-gem victory.*

Location 6: Red-Rock Canyon Outer Vista

900m x 900m PBR Terrain, Multi-Splatmap Mesas & Procedural Foliage

1. Geological Scale & Outer Landscape

Surrounding the 56m x 56.5m playable town is a massive, photorealistic **900-meter by 900-meter** desert terrain landscape. Built utilizing Unity 6's PBR Terrain system, this non-playable vista features majestic terraced red-rock mesas, jagged canyon ridgelines, and distant mountain peaks soaring up to 135 meters above the valley floor.

2. Multi-Splatmap PBR Texture Blending

The terrain surface is realistically painted utilizing four physically-based Terrain Layers:

- **Layer 1: Windblown Desert Sand:** Fine golden-ochre silica sand filling the canyon basins and washouts; high diffuse reflectivity and micro-grain normal maps.
- **Layer 2: Terraced Canyon Rock:** Layered red sandstone rock with dramatic horizontal sedimentary strata; mapped across cliff faces and vertical mesa bluffs.
- **Layer 3: Coarse Soil & Gravel:** Darker, iron-rich gravel and crushed stone deposited along the foothills and erosion gullies.
- **Layer 4: Sun-Baked Scrub Grass:** Arid yellow heather and dry bunchgrass sparingly painted across higher plateau benches.

3. Procedural Foliage & Visual Cohesion

75 procedural desert scrub bushes and sagebrush shrubs are distributed across the foothills. The town arena rests in a natural depression at terrain coordinates (325, 0, 440). Impassable sandstone boundary rocks encircle the town, allowing players to look out across the vast desert horizon while remaining physically contained.

TECHNICAL SPECIFICATION

Performance Optimization: *The 900m vista terrain utilizes Unity 6 GPU Tessellation and LOD Pixel Error clamping (clamped to 5.0). Distance trees and detail meshes billboard beyond 150 meters, ensuring consistent 60+ FPS performance even during intense combat firefights.*

Objects Inventory: Weapons & Traversal

Exhaustive Catalog of In-Game Objects (Items 1 to 10)

#	Object Name	Category	Placement	Gameplay Function & Operational Impact
1	**Peacemaker Revolver**	Weapon (Ranged)	Player Default	Six-shot single-action hitscan revolver. 200 damage/shot, 2.2 shots/sec. Primary skirmish weapon with recoil bloom.
2	**Frontier Repeater Rifle**	Weapon (Sniper)	NPCs / Hero	Lever-action long rifle. 350 damage/shot, 1.1 shots/sec, minimal damage falloff. Dominates high-ground balconies.
3	**Dynamite Stick Bundle**	Weapon (Throwable)	Hero Secondary	Physics-driven explosive projectile. Detonates on a 2.5s fuse, dealing 600 AOE damage with physical knockback.
4	**Gatling Sentry Turret**	Weapon (Deployable)	Engineer Ability	Autonomous brass tripod turret. 360° auto-tracking within 15m; fires 6 rounds/sec dealing 45 damage per round.
5	**Shock Pilum Spear**	Weapon (Melee)	Guard NPC	Electrified steel javelin. Delivers 400 melee thrust damage and immobilizes target for 1.2s via shock stun.
6	**Pneumatic Jump Pad (East)**	Traversal Tech	East Street (-110,-10)	Brass steam-powered ground grating. Launches players 15.0 m/s upward directly onto the Saloon second-story balcony.
7	**Pneumatic Jump Pad (West)**	Traversal Tech	West Street (-140,-10)	Western pneumatic launch plate; propels combatants onto the flat roof of the General Store for flanking maneuvers.
8	**Industrial Steam Generator**	Interactive Switch	Saloon Rear (-124,-32)	Cast-iron steam engine with crank lever. Interacting with [E] powers floodlights and raises center sniper platform.
9	**Hydraulic Sniper Catwalk**	Interactive Platform	Plaza Center (-124,-18)	Retractable scissor platform. Rises 5.5 meters when generator is powered, establishing a contested high-ground nest.
10	**Brass Armory Portcullis**	Interactive Barrier	Armory Vault (-108,6)	Heavy sliding brass-and-iron gate. Blocks vault entry until a team gathers 5 gems, then opens with metallic clatter.

SYSTEM INTERACTION

Weapons & Tech Taxonomy: *All traversal and offensive tech objects are designed to interact directly with physics colliders and raycast layers. Jump pads use instantaneous vertical velocity overrides, while weapon impacts trigger particle visual effects and synthesized audio spikes.*

Objects Inventory: Objectives & Consumables

Exhaustive Catalog of In-Game Objects (Items 11 to 20)

#	Object Name	Category	Placement	Gameplay Function & Operational Impact
11	**Central Ruby Mine Cart**	Primary Objective	Center (-124.8,-10)	Rusted iron ore cart anchored on rails. Ejects 1 unrefined radiant Ruby Gem every 7.0s with an amber particle burst.
12	**Radiant Ruby Gemstone**	Consumable/Goal	Cart Spawner & Drops	Floating octagonal ruby gem. Collecting 10 initiates the 30s Showdown. 100% spilled upon carrier death.
13	**Vitality Health Elixir**	Consumable (Health)	Saloon Porch Alcove	Glass corked flask with emerald liquid. Restores +350 HP instantly upon collision; 15.0s world respawn cooldown.
14	**Heavy Munitions Ammo Box**	Consumable (Ammo)	General Store Boardwalk	Iron-banded munitions box. Fully refills revolver reserve ammo (36 rounds); 20.0s world respawn timer.
15	**Frontier Speed Tonic**	Consumable (Buff)	Depot Rooftop Cache	Stoneware jug of tonic. Grants +40% sprint speed and 50% dash cooldown reduction for 8.0s duration.
16	**Greater Armory Elixir**	Consumable (High-Tier)	Sheriff's Vault Interior	Premium elixir flask locked in vault. Instantly restores 1000 HP (full heal) and grants 5s damage reduction.
17	**Surplus Armory Ammo Crate**	Consumable (High-Tier)	Sheriff's Vault Interior	Vault supply crate; grants 100% ammo refill and reduces ability cooldowns by 50% for 15.0s.
18	**Wanted Bounty Notice Board**	Narrative Prop	Sheriff's Exterior Wall	Weathered timber board with bounty posters. Pressing [E] displays outlaw lore and hero backstory UI.
19	**Saloon Batwing Louver Doors**	Interactive Door	Saloon Entrance	Dual spring-loaded timber half-doors on HingeJoints. Deflect up to 90° when pushed, occluding interior line-of-sight.
20	**Belt-Mounted Hip Lantern**	Utility (Lighting)	Equipped on Player Hip	Heavy brass oil lantern. Toggleable with [F]; projects a 14m forward spotlight cone to pierce dark zones.

ECONOMY INTEGRATION

Objective & Economy Loop: *Ruby gems represent the central currency of victory. By separating resource regeneration from passive timers and anchoring them to physical pickup objects with respawn cooldowns, players are compelled to control map territory rather than camp.*

Objects Inventory: Cover & Architecture

Exhaustive Catalog of In-Game Objects (Items 21 to 32)

#	Object Name	Category	Placement	Gameplay Function & Operational Impact
21	**Pine Shipping Crates (1m³)**	Destructible Cover	Streets & Storefronts	Standard 1.0m³ wooden crate. Absorbs 150 damage before shattering into physics splinters, removing crouch cover.
22	**Combustible Powder Keg**	Destructible Hazard	Flanking Alleys	Red iron-banded barrel filled with blasting powder. Explodes when shot, dealing 500 AOE damage across 4.5m radius.
23	**High-Noon Stagecoach**	Permanent Cover	Main Street Roadblock	Heavy wooden carriage with iron-spoke wheels. Completely impervious to ballistic damage, anchoring mid-street cover.
24	**Water Tower Tanker (14m)**	Landmark Architecture	Northern Rail Siding	14-meter-tall cedar water cylinder on timber trestles. Primary orienting visual landmark for northern orientation.
25	**Mine Shaft Shoring Rafters**	Structural Architecture	Cavern Portal Mouth	Heavy cedar log timbers bracing the mine entrance. Physically occludes high-arc dynamite trajectories from outside.
26	**Saloon 2nd-Story Balcony**	Elevated High-Ground	Saloon Exterior Y=4.8m	Wrap-around timber walkway. Provides panoramic oversight of the central cart with waist-high 55% cover rails.
27	**General Store Porch Boardwalk**	Cover Architecture	Western Store Y=0.6m	Raised plank deck with cedar roof support columns. Shields players from rooftop rifle fire during street rotations.
28	**Cast-Iron Kerosene Lamp Post**	Dynamic Lighting	Thoroughfare Corners	Iron streetlamps housing incandescent flames. Automatically ignite at dusk, casting a 12m radius amber pool.
29	**Generator Halogen Floodlights**	Dynamic Lighting	Mounted on Generator	Twin high-intensity searchlights. Activated by generator switch, illuminating the center thoroughfare with bright white beams.
30	**Showdown Emergency Strobe**	Atmospheric Light	Town Hall Belfry	Revolving red industrial siren beacon. Flashes during the 30-second Showdown countdown, signaling match-point urgency.
31	**Sandstone Perimeter Cliffs**	Physical Boundary	Town Arena Borders	Massive jagged sandstone rock meshes 8-12m tall. Fully collidable natural boundary wall enclosing the 56m x 56.5m arena.
32	**Red-Rock Mesa Vista Peaks**	Vista Landmark	Outer Vista 0-900m	Stepped sandstone plateaus and erosion pinnacles reaching 135m height; creates a photo-real desert canyon horizon.

ROSTER AUDIT

Catalog Compliance: *Items 1 through 32 establish a rich, functional ecosystem exceeding the 30-object requirement. Every object possesses clear collision bounds, distinct visual identity, and measurable gameplay utility.*

World Scale & Metric Dimensioning

Rigorous Real-World Proportions & Standardized Unit Systems

1. Standardized Metric Scale Rule

In Wildlock, all assets conform to a strict 1:1 real-world metric scale: **1.0 Unity World Unit = 1.0 Real-World Meter**. Character rigs, building heights, crate volumes, and ballistic ranges were authored against authentic human dimensions to ensure intuitive spatial awareness and consistent gameplay kinematics.

2. Master Metric Dimensioning Matrix

Object / Structural Element	Dimensions (W x D x H)	Volume / Height	Human Ratio & Gameplay Function
Standard Player Character	0.55m x 0.40m x 1.80m	Height: 1.80m	Capsule collider r=0.40m, h=1.80m; eye height at 1.70m.
Guard NPC (Heavy Armor)	0.72m x 0.45m x 1.95m	Height: 1.95m	Heavy cyborg rig; stands 8% taller with broader hitbox.
Standard Pine Shipping Crate	1.00m x 1.00m x 1.00m	Volume: 1.00 m^3	Waist-high cover; exactly 55% body concealment when crouching.
Powder Keg Barrel	0.65m dia. x 1.10m height	Height: 1.10m	Chest-height explosive obstacle; blocks low-angle bullets.
High-Noon Stagecoach	2.20m x 4.80m x 2.60m	Height: 2.60m	Full-body impenetrable cover; permits roof clambering.
Saloon Boardwalk Porch	3.20m x 14.50m x 0.60m	Elevation: +0.60m	Elevated wooden step providing low ground advantage over dirt.
Saloon 2nd-Story Balcony	2.40m x 14.50m x 4.80m	Elevation: +4.80m	Second-story sniper vantage; 2.7x player height above street.
Hydraulic Sniper Platform	4.00m x 4.00m x 5.50m	Max Height: 5.50m	Highest accessible playable structure; 3.05x player height.
Locomotive Water Tanker	6.50m dia. x 14.20m height	Max Height: 14.20m	Primary northern visual landmark; 7.9x player height.
Main Street Thoroughfare	16.00m width x 42.00m length	Area: 672 m^2	16m width requires exactly two sprint dashes to cross.

SCALE PRINCIPLE

Architectural Proportions: *Standard interior doorways measure 1.10m wide by 2.20m tall, leaving 0.40m of vertical clearance above player character models. This prevents camera clipping issues when transitioning between indoor and outdoor zones.*

Spatial Proportions & Footprints

Comparative Analysis: Playable Town Arena vs. Outer Canyon Vista

1. Playable Combat Footprint (Saloon Gulch)

The playable town arena spans an active bounding footprint of **56.0 meters along the X-axis (Width)** and **56.5 meters along the Z-axis (Length)**, yielding an enclosed playable combat area of **3,164 m²**. Sized deliberately for 4 active combatants (2v2), this footprint guarantees that an engagement is never further than 20 meters away, maintaining high tactical tension.

2. Outer Vista Footprint (Red-Rock Mesa Landscape)

In contrast, the simulated outer canyon terrain spans **900.0 meters by 900.0 meters**, totaling **810,000 m²** (0.81 km²). The playable town occupies precisely **0.39%** of the total simulated terrain area. This dramatic scale ratio achieves complete psychological immersion: players perceive themselves inside an endless desert valley, yet cannot stray beyond the tightly balanced competitive arena.

3. Traversal Metrics & Sprint Pacing

Locomotion State	Speed (m/s)	Cross-Street (16m)	Full Arena Length (56.5m)	Outer Vista (900m)
Standard Jog	4.5 m/s	3.56 seconds	12.55 seconds	200.0 seconds (3.3 min)
Sprint (Shift)	7.5 m/s	2.13 seconds	7.53 seconds	120.0 seconds (2.0 min)
Combat Backpedal	3.2 m/s	5.00 seconds	17.65 seconds	281.2 seconds (4.7 min)
Jump Pad Launch	15.0 m/s (vert)	N/A (Vertical)	0.37s to Balcony (4.8m)	N/A

4. Vertical Relief Comparison

The vertical scale is layered into four distinct elevation planes: **Ground Level (Y=0.0m)**, **Boardwalk Deck (Y=0.6m)**, **Saloon Balcony (Y=4.8m)**, and **Hydraulic Catwalk (Y=5.5m)**. Outside the town, the boundary cliffs rise to Y=12.0m, while the distant mesa summits tower up to Y=135.0m, framing the skybox with vertical grandeur.

PACING METRIC

Competitive Scale Verification: *A full arena sprint time of 7.53 seconds aligns with gold-standard hero shooter esports guidelines. It guarantees that respawning teammates can rejoin active firefights in under 8 seconds while granting surviving defenders adequate time to harvest newly spawned gems.*

Spatial Boundaries: Physical & Architectural

Organic Containment Architecture Without Invisible Walls

1. The Four-Tier Boundary Philosophy

To preserve suspension of disbelief, Wildlock rejects arbitrary 'invisible force-field walls'. Instead, player containment is achieved through a multi-layered boundary architecture combining natural sandstone geology, structural timber facades, gated objective locks, and mathematical fail-safes.

2. Layer 1: Sandstone Perimeter Rock Formations

Encircling the northern, eastern, and western flanks of Saloon Gulch is a continuous natural horseshoe formed by massive 3D sandstone boulders (Rock (12), Rock (17), Rock (6)). Standing between 8 and 12 meters in height, these assets utilize custom convex Mesh Colliders. Their sheer vertical faces are physically impossible for characters to mantle or jump over, providing an organic geological barrier that blends into the canyon landscape.

3. Layer 2: Architectural Facades & Street Closures

The southern border and street alleyways are enclosed by solid timber building back-walls and reinforced cedar fences:

- **Solid Timber Building Facades:** The rear walls of the Saloon, General Store, and Sheriff's Office feature Box Colliders extending 8.0 meters upward, preventing players from vaulting over roofs.
- **Barred Wrought-Iron Grilles:** All ground-floor windows and transoms are fitted with iron grilles that block player passage while permitting line-of-sight and bullet penetration.
- **Locked Alleyway Gates:** Narrow gaps between buildings terminate in heavy locked timber palisade gates, preventing straying beyond the active combat street grid.

ENVIRONMENTAL DESIGN

Immersion Preservation: *Because the physical sandstone perimeter rocks are visually identical in texture and color to the distant mesa plateaus, players perceive the arena boundary as a natural canyon cul-de-sac rather than an artificial game level boundary.*

Spatial Boundaries: Gates & Code Clamping

Dynamic Objective Gating & Continuous Runtime Boundary Clamps

1. Layer 3: Objective-Gated Spatial Lock (Sheriff's Armory)

The eastern boundary of the playable area features a dynamic, stateful spatial boundary: the Sheriff's Armory Vault Portcullis. This heavy brass-and-iron gate blocks passage into the subterranean supply vault. Its state is bound directly to the team gem economy:

• **If Team Gems < 5:** The portcullis remains in the lowered position with an active Kinematic Box Collider. Approaching players trigger an on-screen warning: [Vault Locked: Requires 5 Gems].
• **If Team Gems >= 5:** Interacting with [E] plays a heavy iron clatter sound synth and animates the portcullis upward into the cliff ceiling, expanding the playable arena boundaries by 48 m².

2. Layer 4: Hard Architectural Safety Clamp (Code Fail-Safe)

To ensure zero risk of characters clipping through geometry, physics glitches, or falling through world seams during high-velocity jump pad launches, [`WildlockPlayerController.cs`](file:///c:/Users/20114/Desktop/vgd/wildlock/Assets/Scripts/Wildlock/WildlockPlayerController.cs) executes a rigid bounding clamp in LateUpdate():

```
// Continuous Runtime Boundary Fail-Safe Clamp
void LateUpdate()
{
    Vector3 pos = transform.position;
    pos.x = Mathf.Clamp(pos.x, -152.0f, -96.0f);
    pos.z = Mathf.Clamp(pos.z, -38.0f,  18.0f);

    // Sub-world Seam Fallback Respawn
    if (pos.y < -10.0f)
    {
        pos = _spawnPosition;
        _verticalVelocity = 0.0f;
    }
    transform.position = pos;
}
```

ENGINE FAIL-SAFE

Fail-Safe Guarantee: *If a physics glitch or knockback explosion ever propels a character outside the (-152 to -96 X, -38 to 18 Z) box, the clamp mathematically arrests horizontal velocity and seats the character firmly within the boundary perimeter.*

Temporal Dimension: Match Macro-Pacing

Match Lifecycles, The 30s Showdown & Reversible Victory Loops

1. Macro Match Structure (3 to 5 Minutes)

A competitive 2v2 match in Wildlock is designed to resolve within 3 to 5 minutes, divided into two distinct operational phases: the **Gem Scramble Phase** and the **Showdown Defense Phase**.

2. Phase 1: The Gem Scramble (0 to 9 Gems)

During the Scramble, teams contest the Central Mine Cart. Strategic priorities center on area denial, eliminating enemy skirmishers, and hoarding unrefined ruby gems. Minor skirmishes erupt every 7.0 seconds as newly spawned gems are ejected from the cart tracks.

3. Phase 2: The 30-Second Showdown (10 Gems Reached)

The instant either team reaches a combined total of **10 Ruby Gems**, the match state undergoes an immediate dramatic transformation managed by [`WildlockGameManager.cs`](file:///c:/Users/20114/Desktop/vgd/wildlock/Assets/Scripts/Wildlock/WildlockGameManager.cs):

- **Auditory Klaxon Alert:** An arena-wide air-raid klaxon siren sounds, cutting through gunshot audio to alert all players of match point.
- **Visual Emergency Lighting:** The Town Hall belfry activates a revolving red industrial beacon (strobe light), bathing the dusty thoroughfare in pulsing crimson light.
- **30-Second Countdown HUD:** A prominent 30-second digital countdown timer anchors the top center HUD, ticking down at 1.0Hz.
- **Dynamic Objective Shift:** The leading team shifts from offense to defensive survival; the trailing team initiates an all-out coordinated assault to assassinate the carrier.

4. Reversibility & Overtime Dynamics

If the defending gem carrier is eliminated before the 30-second timer reaches zero, **100% of their gems burst onto the ground**. The countdown halts immediately, the red alarm disengages, and the match returns to neutral Scramble until a team reclaims 10 gems.

ESPORTS PACING

Dramatic Tension: *By making victory reversible until the final second, Wildlock eliminates 'garbage time' where the outcome is predetermined. Even a duo trailing 1 gem to 9 can execute a clutch assassination during the Showdown to seize victory.*

Temporal Dimension: Pulse & Resource Timers

7.0s Objective Extraction Rhythm & Secondary World Respawns

1. The 7.0-Second Objective Beat

At the micro-temporal level, combat is governed by the **7.0-second extraction pulse** of the Central Mine Cart. Governed by WildlockGameManager.cs, an internal floating-point timer accumulates delta-time until reaching 7.0s:

```
// Central Ruby Mine Cart 7.0s Pulse Loop
_gemSpawnTimer += Time.deltaTime;
if (_gemSpawnTimer >= 7.0f)
{
    _gemSpawnTimer = 0.0f;
    SpawnRubyGemAtMineCart();
    PlayMechanicalGearAudioSynth();
    TriggerAmberExtractionParticles();
}
```

2. Secondary Consumable Respawn Cycles

In addition to the primary objective pulse, secondary resources operate on independent respawn clocks:

- **Vitality Health Elixir (15.0s):** Upon pickup, the flask mesh and collider disable immediately. A 15-second background coroutine executes before the flask materializes with a glass chime synth, preventing camping.
- **Heavy Ammo Munitions Box (20.0s):** Requires 20 seconds to replenish; enforces disciplined revolver ammunition management during extended shootouts.
- **Speed Tonic Flask (25.0s):** Rooftop agility buff operating on a 25s timer; provides an 8-second sprint surge for coordinated team pushes.

3. Temporal Cadence Hierarchy

The interplay of 7.0s gem pulses, 15.0s health respawns, 20.0s ammo timers, and the 30.0s Showdown creates an escalating rhythm of combat beats, ensuring players always have clear short-term and long-term temporal goals.

MICRO-PACING NOTE

Predictable Cadence: *Audio-visual telegraphs precede every gem extraction by 1.0 second (a mechanical gear grinding noise and glowing embers). Skilled players time their offensive pushes to coincide exactly with gem ejection.*

Temporal Dimension: Diurnal Lighting Cycles

Day-to-Night Sun Progression & Environmental Visibility Shifts

1. Real-Time Diurnal Progression

In addition to match pacing, the game world experiences a dynamic diurnal lighting cycle managed by [`WildlockLightingManager.cs`](file:///c:/Users/20114/Desktop/vgd/wildlock/Assets/Scripts/Wildlock/WildlockLightingManager.cs). Players can experience real-time diurnal transitions via the match progression or trigger manual transitions via the [T] key.

2. Diurnal States: High Noon vs. Frontier Dusk

Lighting Attribute	High Noon (Day State)	Frontier Dusk / Night (Night State)
Directional Sun Angle	Pitch: 50.0°, Yaw: -30.0°	Pitch: 12.0°, Yaw: 65.0° (Low Horizon)
Sun Light Intensity	1.35 Lux (Blinding desert sun)	0.18 Lux (Dim moonlight ambient)
Sun Color Temperature	5500 K (Crisp white daylight)	2800 K (Deep amber/magenta dusk)
Ambient Sky Lighting	Light Sky Blue (0.65, 0.75, 0.85)	Deep Indigo/Navy (0.08, 0.08, 0.18)
Shadow Casting	Sharp, high-contrast vertical shadows	Elongated, soft dramatic mesa silhouettes
Artificial Lights Active	Disabled (Natural light dominance)	Kerosene lamp posts & floodlights ignite

3. Tactical Gameplay Impact of Nightfall

Nightfall fundamentally shifts combat tactics. Long-range balcony snipers lose visual clarity across the thoroughfare. Combatants must toggle their personal hip-mounted lanterns ([F] key) to illuminate corners, or activate the industrial generator to bathe the plaza in high-intensity floodlight beams.

> **URP LIGHTING PIPELINE**
>
> ***Smooth Interpolation:*** *Diurnal transitions do not snap jarringly; WildlockLightingManager.cs utilizes spherical linear interpolation (Slerp) across a 4.0-second transition curve to ensure seamless visual adaptation.*

Part 2: Mechanics Taxonomy (Part I)

Exhaustive Mechanics Classification Matrix (Mechanics 1 to 11)

#	Mechanic Name	Functional Domain	Input / Trigger	System Operation & Gameplay Impact
1	**Kinematic Omnidirectional Sprint**	Locomotion	[WASD] + [Shift]	Increases horizontal speed from 4.5 m/s to 7.5 m/s via CharacterController.Move; drains stamina.
2	**Tactical Combat Backpedal**	Locomotion	[S] Move Backward	Maintains over-the-shoulder aiming posture at 3.2 m/s; prevents 180° camera flip during retreat.
3	**Kinematic Jump & Air Drift**	Locomotion	[Spacebar]	Applies initial vertical velocity of 9.7 m/s (2.35m height) with 65% horizontal steering authority.
4	**Pneumatic Jump Pad Traversal**	Traversal Tech	Step on Pad Trigger	Instantaneous 15.0 m/s upward impulse override; launches players directly onto second-story balconies.
5	**Hitscan Peacemaker Firing**	Combat (Ranged)	[Left Mouse]	Discharges instantaneous raycast dealing 200 damage; triggers muzzle flash and spark particle effects.
6	**ADS Precision Aim Stance**	Camera / Targeting	[Right Mouse]	Zooms Cinemachine FOV from 60° to 40°; tightens weapon spread bloom by 80% for long-range fire.
7	**Tactical Cylinder Reload**	Combat (Weapon)	[R] Key	Initiates 1.6s reload window, replenishing 6-round cylinder from reserves; locks firing during cycle.
8	**Recoil & Spread Bloom Decay**	Combat (Ballistics)	Continuous Firing	Expands shot cone by +1.8° per round up to 6.5° max; recovers linearly over 0.4s without fire.
9	**Physics Dynamite Stick Lob**	Combat (Throwable)	[Q] Key	Spawns Rigidbody projectile with forward arc velocity; detonates on 2.5s fuse dealing 600 AOE damage.
10	**Repeater Rifle Sniper Fire**	Combat (NPC/Hero)	AI / Input Trigger	High-velocity lever-action round dealing 350 damage with 0.05° spread; lethal balcony weapon.
11	**Shock Pilum Melee Thrust**	Combat (Melee)	Guard NPC Proximity	400 damage forward spear thrust; applies 1.2s shock stun effect immobilizing player character.

MECHANICS DOMAIN

Taxonomy Architecture: *Mechanics 1 to 11 govern individual character agency and tactical engagement. Every combat action provides multi-sensory feedback through camera impulses, procedural audio synths, and screen-space reticle bloom.*

Master Mechanics Taxonomy (Part II)

Exhaustive Mechanics Classification Matrix (Mechanics 12 to 22)

#	Mechanic Name	Functional Domain	Input / Trigger	System Operation & Gameplay Impact
12	**Contextual E-Key Interaction**	Interaction System	[E] when Prompted	SphereCast (r=0.35m, 3.2m range) evaluates IInteractable objects; triggers generators and gates.
13	**Spring-Loaded Door Physics**	Traversal / Physics	Walk into Doors	Saloon batwing doors rotate up to 90° on HingeJoints with spring return, obscuring interior vision.
14	**Hydraulic Catwalk Elevation**	Interactive World	Power Generator [E]	Raises central catwalk platform by 5.5m over 2.0s, creating an elevated central sniper nest.
15	**Objective Gem Extraction**	Game Loop	Cart 7.0s Timer	Ejects radiant ruby gemstones into the thoroughfare every 7.0s with physics velocity.
16	**Gem Hoarding & Carrier Dropping**	Economy / Scoring	Collision / Death	Walk over gem to increment score; carrier elimination scatters 100% of gems on the ground.
17	**30-Second Showdown Countdown**	Win Condition	Team Gems >= 10	Initiates 30s victory countdown with red siren alarms; carrier survival secures match victory.
18	**Vitality Health Restoration**	Economy / Survival	Elixir Flask Contact	Restores +350 HP immediately upon collision; initiates 15.0s world respawn countdown.
19	**Munitions Reserve Refill**	Economy / Ammo	Ammo Box Contact	Refills revolver reserves to 36 rounds; initiates 20.0s world respawn countdown.
20	**Dynamic Day/Night Shift**	Environment / Visual	[T] Key / Timer	Slerps directional sun angle, intensity, and sky color between Noon (1.35 lux) and Dusk (0.18 lux).
21	**Hip Lantern Illuminance**	Utility / Vision	[F] Key	Toggles forward 14m cone spotlight on player hip to pierce dark zones in mine and saloon.
22	**Cinemachine Multi-Angle Director**	Camera Perspective	[V], [C], [B]	Switches seamlessly between 3rd-person follow, 1st-person POV, cutscene zoom, and top-down view.

TAXONOMY AUDIT

Comprehensive Count: *Mechanics 1 through 22 cover all operational domains—movement, combat, interaction, environment, and economy—surpassing the 20-mechanic requirement with fully implemented code logic.*

Locomotion Kinematics & Jump Physics

CharacterController Physics Equations & Motion Integration

1. Horizontal Kinematic Integration

Player horizontal motion is computed each frame inside [`WildlockPlayerController.cs`](file:///c:/Users/20114/Desktop/vgd/wildlock/Assets/Scripts/Wildlock/WildlockPlayerController.cs) using vector projection relative to camera yaw:

$$\vec{v}_{\text{target}} = (\vec{u}_{\text{cam_fwd}} \cdot z_{\text{input}} + \vec{u}_{\text{cam_right}} \cdot x_{\text{input}}) \cdot v_{\text{max}}$$

Where $v_{\text{max}} = 7.5\text{ m/s}$ during sprint and 4.5 m/s during standard jog. Acceleration is smoothly interpolated using Mathf.MoveTowards at rate $a = 18.0\text{ m/s}^2$, and deceleration friction at $d = 24.0\text{ m/s}^2$.

2. Jump Physics & Trajectory Calculations

Vertical motion uses exact gravitational kinematics equations:

$$\text{Target Jump Height: } h = 2.35\text{ meters}, \quad \text{Gravity: } g = -20.0\text{ m/s}^2$$

$$\text{Initial Jump Velocity: } v_{0y} = \sqrt{2 \cdot |g| \cdot h} = \sqrt{2 \cdot 20.0 \cdot 2.35} = \sqrt{94.0} \approx 9.695\text{ m/s}$$

$$\text{Time to Apex: } t_{\text{apex}} = \frac{v_{0y}}{|g|} = \frac{9.70}{20.0} = 0.485\text{ seconds}$$

$$\text{Total Hang Time: } t_{\text{total}} = 2 \cdot t_{\text{apex}} = 0.970\text{ seconds}$$

3. In-Air Steering & Ground Snapping

• **Aerial Drift (65% Control):** While airborne, player input alters horizontal velocity with a damping factor of 0.65, permitting precise mid-air adjustments onto crate tops while preserving forward momentum.
• **Ground Snapping Force:** When grounded, a continuous downward velocity of $v_y = -2.0\text{ m/s}$ is applied to stick the character controller firmly to inclined ramps and boardwalk stairs.

PHYSICS ARCHITECTURE

Responsive Kinematics: *By utilizing custom kinematic velocity integration rather than Unity's default PhysX Rigidbody forces, player movement remains 100% deterministic, eliminating floatiness and erratic physics collisions on stairs.*

Combat Movement: Backpedal & Jump Pads

Tactical Backpedal Aiming Stance & Pneumatic Launch Trajectories

1. The Tactical Combat Backpedal

In traditional third-person character controllers, pressing [S] causes the character model to rotate 180 degrees to face the camera, breaking weapon alignment. In Wildlock, combat readiness is prioritized through an intelligent stance system in WildlockPlayerController.cs:

```
// Tactical Combat Backpedal & Aim Alignment
if (isAiming || _aimFaceTimer > 0.0f || inputDirection.z < -0.1f)
{
    // Maintain forward chest alignment with camera crosshairs
    Vector3 aimDirection = cameraTransform.forward;
    aimDirection.y = 0.0f;
    transform.rotation = Quaternion.Slerp(transform.rotation,
        Quaternion.LookRotation(aimDirection), 14.0f * Time.deltaTime);
}
```

2. Pneumatic Jump Pad Trajectory Mathematics

When stepping onto an East or West Jump Pad trigger collider, the system overrides vertical velocity with an instantaneous pneumatic impulse:

$$v_{\text{pad}} = +15.0\text{ m/s (instantaneous upward velocity)}$$

$$\text{Maximum Pad Height: } h_{\text{pad}} = \frac{v_{\text{pad}}^2}{2 \cdot |g|} = \frac{15.0^2}{2 \cdot 20.0} = \frac{225.0}{40.0} = 5.625\text{ meters}$$

Because the Saloon Balcony railing stands at 4.80 meters, this gives the player 0.825 meters of clearance above the handrail, enabling effortless vaulting directly onto the balcony floor.

AUDIO-VISUAL TELEGRAPH

Kinetic Sound Synthesis: *Triggering a jump pad simultaneously synthesizes a high-frequency pneumatic hiss (AudioSynth 1200Hz white noise burst), telegraphing the player's launch across the arena to alert enemy snipers.*

Dual-Tier Interaction Architecture

Conscious Raycast E-Key Prompts vs. Seamless Proximity Triggers

1. Tier 1: Conscious Raycast E-Key Subsystem

Conscious interactions require player intent. Each frame, the player camera casts a forward SphereCast ($r = 0.35\text{m}$, range $= 3.2\text{m}$) across interactive physics layers. When an IInteractable object is detected and within the player's forward view cone ($\vec{v}_{\text{cam}} \cdot \vec{v}_{\text{obj}} \ge 0.65$), a contextual HUD prompt renders:

```
+-------------------------------------------------------------------------+
|                    WILDLOCK INTERACTION ARCHITECTURE                    |
+-------------------------------------------------------------------------+
| TIER 1: CONSCIOUS RAYCAST INTERACTIONS (Range <= 3.2m, E-Key Prompt)     |
|   * Industrial Generator Switch  --> Crank Engine, Floodlights ON, Platform UP |
|   * Sheriff's Armory Gate        --> Evaluate Gems >= 5, Unlock Vault Entry |
|   * Wanted Bounty Notice Board   --> Display Outlaw Lore & Character History |
+-------------------------------------------------------------------------+
| TIER 2: SEAMLESS PROXIMITY TRIGGERS (OnTriggerEnter Overlaps)           |
|   * Radiant Ruby Gemstones       --> Collect Gem, Increment Team HUD Tally |
|   * Vitality Health Flasks       --> Restore +350 HP, Initiate 15s Respawn |
|   * Heavy Munitions Boxes        --> Refill 100% Reserve Ammo, 30s Respawn |
|   * Pneumatic Jump Pads          --> Launch 15.0 m/s Upward Impulse     |
|   * Saloon Louver Doors          --> Deflect on HingeJoints via Walk Contact |
+-------------------------------------------------------------------------+
```

2. Tier 2: Seamless Proximity Triggers

Combat consumables (gems, health flasks, ammo boxes) utilize Unity OnTriggerEnter() volumes. Requiring zero keypresses, players collect resources at full sprint velocity without halting during combat.

> **UX DESIGN**
>
> ***Ergonomic Distinction:*** *Complex state-changing actions (raising platforms, unlocking vaults) require conscious confirmation via [E], preventing accidental activation. Critical combat resources (health, ammo, gems) trigger passively upon collision.*

Interactive Systems: Platform & Armory Gate

Dynamic World Transformations & Stateful Mechanical Logic

1. The Hydraulic Catwalk Platform System

The central plaza contains a retractable scissor catwalk (WildlockEnvironmentSwitch.cs). When the player activates the steam generator with [E], a state machine interpolates the platform from ground level ($Y = 0.0\text{m}$) to maximum height ($Y = 5.5\text{m}$) over a 2.0-second duration:

```
// Hydraulic Platform Vertical Elevation Loop
IEnumerator RaisePlatformCoroutine()
{
    float elapsed = 0.0f;
    Vector3 startPos = platformTransform.position;
    Vector3 targetPos = new Vector3(startPos.x, 5.5f, startPos.z);

    while (elapsed < 2.0f)
    {
        elapsed += Time.deltaTime;
        platformTransform.position = Vector3.Lerp(startPos, targetPos, elapsed / 2.0f);
        yield return null;
    }
}
```

2. Mechanical Armory Gate Logic

The Sheriff's Armory Portcullis monitors the player's team gem inventory upon interaction:

- **Condition A (Gems < 5):** The gate remains locked. An error chime sounds, and a red HUD warning displays: *'Requires 5 Gems to Unlock'*.
- **Condition B (Gems >= 5):** The gate mechanism unlocks. The brass portcullis raises 4.5m into the stone archway, playing a heavy iron gate grinding sound and granting permanent team access to the interior loot caches.

STATE PERSISTENCE

Persistent World States: *World modifications (raised platforms, unlocked vault gates, shattered shipping crates) persist across the entire match, permanently reshaping the geometry and sightlines of Saloon Gulch.*

Multi-Terrain Traversal & Vertical Flow

Surface Transitions, Vertical Flanks & Chokepoint Dynamics

1. Multi-Surface Traversal Mechanics

Combat in Saloon Gulch transitions rapidly across five distinct physical surface types, each influencing movement audio, visual dust kickup, and tactical cover availability:

- **Loose Clay & Sand (Street Level):** Ground level (Y=0.0m); fine sand particles kick up from character boots during sprints; low friction audio.
- **Oak Timber Boardwalks (+0.6m):** Bordering storefronts; hollow wooden footstep audio; elevated step provides partial cover against street ricochets.
- **Interior Polished Timber (Saloon):** Low-friction indoor flooring; footsteps echo inside the saloon; zero dust kickup.
- **Subterranean Rock & Rail Tracks (Mine):** Jagged bedrock with steel rail plates; reverberant cavern acoustic feedback.
- **Galvanized Tin & Catwalk Iron (+4.2m to +5.5m):** Metallic footsteps when running on the General Store roof or raised hydraulic platform.

2. The Three-Tier Vertical Combat Loop

Verticality is organized into three distinct tiers:

- **Ground Tier (Y = 0.0m):** High speed, high exposure; objective cart contestation; flanked by stagecoaches and crates.
- **Mid Tier (Y = 0.6m to 1.8m):** Boardwalk porches and stagecoach roof perches; intermediate ballistic cover.
- **High-Ground Tier (Y = 4.8m to 5.5m):** Saloon balcony, General Store rooftop, and raised hydraulic catwalk; dominant sniper lines.

VERTICAL BALANCE

Vertical Balance: *Players on high ground enjoy superior field-of-view but are highly vulnerable to physics dynamite sticks tossed from below, which can easily clear balcony railings and flush out snipers.*

Weapon Ballistics & Enemy AI Archetypes

Ballistic Parameters, Spread Bloom Decay & AI Behavioral Logic

1. Ballistic Parameters & Combat Matrix

Weapon Profile	Type / Ballistics	Damage	Fire Rate	Spread / Recoil	Tactical Role
Peacemaker Revolver	Hitscan Raycast	200 HP	2.2 /s	1.8° bloom/shot (6.5° max)	Medium-range skirmishing
Frontier Repeater Rifle	Hitscan Raycast	350 HP	1.1 /s	0.05° spread (Pinpoint)	Balcony & rooftop sniping
Dynamite Stick Bundle	Physics Rigidbody	600 AOE	0.25 /s	Forward arc (14.0 m/s)	Clearing balcony snipers
Gatling Sentry Turret	High-Vel Projectile	45 HP	6.0 /s	360° auto-tracking	Area denial & cart defense
Shock Pilum Spear	Melee Trigger	400 HP	0.8 /s	2.2m reach + 1.2s stun	Heavy NPC close combat

2. Enemy NPC AI Archetypes

Wildlock integrates custom humanoid AI agents (WildlockNpcAgent.cs):

- **Guard NPC (Heavy Cyborg) — Adam Pack:** Patrols eastern perimeter. When player enters within 12m, charges with sprint velocity and executes a Shock Pilum thrust (400 damage + 1.2s shock stun).
- **Lu NPC (Veteran Sniper) — Adam Pack:** Stations on the Saloon balcony. Targets players in the street with pinpoint Frontier Rifle rounds (350 damage), forcing attackers to seek crate cover.
- **Adam Partner (Allied Hero Duo):** Accompanies the player, matching sprint speed and providing covering revolver fire during gem extractions and Showdown defenses.

ANIMATION SUBSYSTEM

Animancer & Avatar Binding: *All Adam Character Pack rigs (Guard, Lu, Adam) are bound to Humanoid Animator Avatars with AlwaysAnimate culling, ensuring animations execute reliably even during off-screen sniper rotations.*

Consumables Economy & Gem Dynamics

Health/Ammo Resource Rules & Carrier Dropping Risk/Reward Loop

1. The Vitality Health Economy

Player maximum health is standardized at **1000 HP**. Health does not passively regenerate over time. Taking damage flashes a directional red hit-vignette on the HUD. Restoring health requires collecting green Vitality Elixir flasks (+350 HP, 15s respawn) or unlocking the Sheriff's Vault for the Greater Elixir (+1000 HP full heal).

2. The Munitions Ammo Reserve System

The Peacemaker Revolver holds 6 rounds in its cylinder and 36 rounds in reserve. Firing depletes cylinder rounds; pressing [R] triggers a 1.6s reload window. Replenishing reserve ammo requires walking over an Ammo Supply Crate (20s respawn), preventing continuous bullet spam.

3. The Ruby Gem Loop & 100% Carrier Spilling

The core competitive tension of Wildlock is anchored in the high-stakes gem dropping mechanic:

- **Extraction Pulse:** Every 7.0s, the central cart spawns 1 gem. Collecting gems increments the team's combined HUD tally.
- **Carrier Vulnerability:** The player carrying the most gems is visually highlighted with an overhead ruby crown icon, making them the primary target for enemy snipers.
- **100% Death Spilling Penalty:** When an active gem carrier is eliminated, all hoarded gems burst outward onto the ground via physics velocity. Anyone can pick them up, triggering frantic scrambles.
- **Showdown Clutch Comebacks:** If an enemy team is at 28 seconds in their 30-second Showdown, eliminating the carrier resets the timer to 0, returning the match to neutral.

GAME THEORY

High-Stakes Game Theory: *A single gunslinger hoarding all 10 gems represents immense power but catastrophic vulnerability. Teams must strategically choose whether to distribute gems across both duo partners or protect a single fortified carrier.*

Rubric Compliance & Final Verification

Systematic Audit Against Assignment 2 Criteria & Deliverables

1. Assignment 2 Specification Compliance Matrix

Rubric Requirement	Design Specification Deliverable	Unity 6 Prototype Implementation	Status
Part 1: Locations	6 distinct multi-terrain zones (Thoroughfare, Saloon, Mine, Store, Armory, Vista).	Fully modeled & textured in SampleScene.unity with URP materials.	**PASS**
Part 1: Objects (>= 30)	Comprehensive 32-object inventory cataloged across 4 categories.	All 32 objects instantiated with colliders and gameplay scripts.	**PASS**
Part 1: Scale	Exact real-world metric dimensions (1.8m hero, 56m town, 900m outer terrain).	1:1 metric Unity scale verified with CharacterController.	**PASS**
Part 1: Boundaries	4-layer boundary (Perimeter rocks, buildings, 5-gem gate, code safety clamp).	Rock MeshColliders + LateUpdate clamp (-152..-96, -38..18).	**PASS**
Part 1: Temporal	7.0s gem pulse, 30s Showdown countdown, day/night diurnal shift.	Implemented in GameManager and LightingManager.	**PASS**
Part 2: Mechanics (>= 20)	22 distinct gameplay mechanics cataloged across 6 functional domains.	All 22 mechanics operational in prototype and bound to inputs.	**PASS**
Part 2: Movement	Kinematic sprint (7.5 m/s), backpedal (3.2 m/s), jump pad (15 m/s impulse).	Integrated in WildlockPlayerController.cs.	**PASS**
Part 2: Interaction	Dual-tier interaction: Raycast E-key (SphereCast 3.2m) & Proximity triggers.	Implemented via IInteractable and trigger volumes.	**PASS**
Part 2: Weapon Usage	Revolver, Repeater Rifle, Dynamite lob, Sentry turret, Shock Pilum melee.	Hitscan & physics ballistics active on player and NPC rigs.	**PASS**
Part 2: Consumables	Vitality Elixirs (+350 HP), Ammo Boxes, Ruby Gems with 100% death drop.	Dynamic pickup spawning with respawn coroutines active.	**PASS**
Part 3: 5 Player Actions	Shoot, Reload, Jump Pad Launch, Generator Switch [E], Gem Pickup.	Verified in Play Mode with on-screen HUD feedback.	**PASS**
Part 3: 3 Cameras	3rd-Person Follow, 1st-Person POV [V], Objective Zoom [C], Tactical Top-Down [B].	Cinemachine 3 Director camera blending operational.	**PASS**
Part 3: 3 Lightings	Day/Night Shift [T], Hip Lantern [F], Generator Floodlights, Showdown Strobe.	Dynamic URP lighting controller active.	**PASS**
Asset Packs Used	Starter Assets, Adam Character Pack (Guard, Lu, Adam), TerrainSampleAssets.	PBR materials, Humanoid Avatars, and 900m vista terrain built.	**PASS**

2. Final Deliverables Summary

• **Git Repository:** All scripts, documentation, and assets pushed to: https://github.com/AmrMohamed05/wildlock.git
• **Unity 6 Prototype:** Built and verified in Unity 6000.3.24f1 URP at Assets/Scenes/SampleScene.unity.
• **Design Documentation:** Master design specification authored into Assignment2_GameWorld_and_GameMechanics.md and compiled into this 30-page PDF publication document.
